

Emergency Medical Teams (EMT's) are becoming an increasingly important part of the global health workforce, playing a fundamental role in disaster and crisis management. EMT Teams, consisting of volunteer paramedics, are equipped with the ability to be ready for crisis and disaster situations at any time and to rapidly deploy to the region. They are qualified, trained, equipped and supplied teams to properly respond to emergencies and not to burden local services.

for those in need of health
WHAT CAN YOU DO?

■ You can volunteer

Organization

EMERGENCY MEDICAL TEAM

AID is part of the global network of EMTs supervised and authorised by the World Health Organization (WHO) and recognised by member countries. AID, which is in the final stage of the verification process, provides rapid, sustainable, competent and voluntary emergency health services to the victims of the world and our country in times of disasters. During the earthquakes of 6 February in Turkey&Syria AID was among the teams that arrived to the region and provided services the most quickly.

OUR EMT VOLUNTEERS

- We organise training and drill activities involving our volunteers.
- In order to create our EMT volunteer team, preliminary interviews were conducted with more than 400 volunteers.
- 129 EMT volunteers completed emergency health and intervention trainings.

UPCOMING ACTIVITIES

- In October 2023, a 3-week EMT mobile field hospital installation drill will be conducted.
- EMT volunteers will carry out the installation of all materials available.
- The mobile field hospital facility, which includes polyclinic, isolation, wet floor, shelter, kitchen, and emergency departments on approximately 2 acres of land, will be completed with our emergency health team of 30 people
