Brief Description

The Natural History Society is a scientific nonprofit organization that conducts research in the field of vertebrate paleontology, particularly in the Portuguese Upper Jurassic. We are looking to participate in our activities, from excavations, work in a laboratory of paleontology and management of paleontological collections. Our project aims to include people who have an interest in this scientific area, thus promoting a unique experience of personal and collective development, and also to raise awareness of the evolution of life on earth and the ecosystems of the past. The areas of operation will be diverse, from paleontological excavations, works in the laboratory of paleontology, use geographic information technologies and development of knowledge about tools used in paleontological studies.

Paleo Volunteering Program

The Laboratory of Paleontology and Paleoecology of the Natural History Society (Torres Vedras, Portugal) accepts volunteers for paleontological excavations, fossil preparation and conservation. If you like paleontology, and want to work closely with paleontologists and learn much more about this area of science, sign up!

The Volunteer Program works during holiday periods, but is also open throughout the year. Just send us your CV and a letter of motivation, so we can give an assessment. The Volunteer Program is open to ages from 18 years with no age limit.

Foreign applicants should seek in their countries of origin for financial aid programs. EU citizens can learn about volunteer programs within Europe.

Volunteering in Vertebrate Paleontology (Dinosaurs)

Volunteering in Paleontology and Paleoecology laboratory, field activities (excavation and prospecting paleontological sites). Working with fossil collections.

Volunteering in the Laboratory of Paleontology and Paleoecology, field activities (excavation and prospecting paleontological sites). Volunteers will have an experience in various tasks that are routine of a paleontologist in laboratory (preparation and management of fossil collections) and in the field.

Other tasks on the GIS field for survey paleontological sites with dinosaurs.

We have several Erasmus+ and ESC projects and also Erasmus+ Traineeship hosting for Geology and Paleontology Master, Bachelor and even Doctorate students. If you need to know our past experiences, we can share.
